Information for visitors to the St. Anna Hospital during the Corona-pandemic

(situation at 13/10/2020)

Dear visitors,

based on the Corona pandemic, we want to minimize the risk of infections for our patients and employees.

We care for, many seriously ill and immunosuppressed patients. For this reason, special regulations are applied to visit our facility. We ask for your understanding that we have to follow the guidelines of the Bavarian state government.

If you had signs of respiratory disease or a febrile infection in the last 14 days, you please do not enter our facility. Please check with your doctor immediately.

If you have been in contact with a person infected with the SARS-CoV-2 virus ("Coronavirus") and/or with the virus in the last 14 days, you are also not allowed to enter our facility.

When visiting our hospital, please note the following:

- Each patient may be visited during the regular visiting hours between 2 p.m. and 7 p.m. **by one person a day for one hour!**
- Accompanying a dying person is allowed at any time.
- If the patient you wish to visit is in our isolation ward (e. g., if Covid-19 is suspected or has been diagnosed), a visit is not possible.
- You must register with your name and telephone number. Your data will be saved for a 30 days to ensure that contact persons can be tracked.
- Visitors are required to wear a mask (mouth-nose-cover) and are required to keep a minimum distance of 1.50 m from other persons throughout the visit. The mouth-nose-cover must be brought by yourself. We ask not to shake hands or hug. Please don't sit on the patient's bed. If it is not possible for you to wear a mouth-nose cover for medical reasons, you are also not allowed to visit patients, as the protection of our patients has absolute priority.

The general hygiene rules must be complied with at all times to protect our patients and employees. This includes in particular:

- Compliance of cough and sneeze label: Use of disposable handkerchiefs for coughing and sneezing, alternatively sneezing or coughing into the elbow.
- Thorough hand hygiene: Frequent hand washing (30 seconds with Water and soap, then rinse thoroughly) and use of a hand disinfection before entering and leaving the facility
- If possible, do not touch the mucous membranes in the facial area (eyes, mouth, etc.) with unwashed hands
- Do not just throw away your garbage please, use the discharge containers provided within the facility.

The staff instructions must be followed at any time. As part of our general house rules, we have the opportunity, as before Corona pandemic, to forbid a visit on a case-by-case basis.

The bringing of gifts and other items for patients and the taking of laundry is to be clarified with us in advance and can be bonned if necessary. We ask for your understanding.

I have taken note of the general information and agree (that my name and telephone number will be registered), and the storage of the data requested here for the purpose described above in case of contacting me.
